

SOCIAL MEDIA PLATFORM:

CONNECTIFY

Weekly Log # 1.

PROJECT MEMBERS:

- Bilal Naeem (F23CSC008).
- Sadia Tehreem (F23CSC043).

WEEKLY LOG:

This week, my partner and I began developing our social media platform, "Connectify". We have several ideas for the project, such as incorporating a chat system and an in-built chatbot. Our progress so far includes creating the login and signup pages, with the system based on file handling. Upon launching the app, the user is presented with the login page, prompting for a username and password, along with options for "Sign Up" and "Forgot Password."

When selecting "Sign Up," users are required to provide the following details:

- Username
- Password
- Email address
- Contact number
- Hint (for password recovery)

The hint feature enables users to retrieve their password via the "Forgot Password" option by entering their hint. This functionality is currently implemented on the terminal screen in IntelliJ Java. Next week, we plan to integrate a graphical user interface (GUI) using Scene Builder.
